Tips to make Holidays more Enjoyable at a Care Facility

Celebrating at a care facility

If your family member lives in a nursing home or other care facility, try these ideas:

- **Celebrate in the most familiar setting.** Because a change in environment can cause distress, consider holding a small family celebration at the facility. You might participate in holiday activities planned for the residents.

- **Minimize visitor traffic.** Arrange for a few family members to drop in on different days. A large group may be overwhelming.

Preparing holiday visitors

To help visitors prepare for holiday time with a person with dementia:

- **Provide an update.** Let guests know ahead of time about any changes in behavior or memory since their last visit. Providing a recent photo can help people prepare for changes in appearance.

- **Offer communication tips.** Suggest ways for guests to listen patiently, such as not criticizing repeated comments, not correcting errors and not interrupting.

- **Suggest activities.** Tell guests ahead of time what activities you have planned or suggest something they might bring, such as a photo album.
Ideas for Holiday Celebrations for Caregivers during COVID

For yourself!
For your facility!
For your resident’s families and friends!

Follow-up PHQ-9 scores can help you monitor depression severity.
Depression can be Disguised

- Trouble thinking
- Hallucinations, Delusions, and Confusion
- Agitation, Aggression
- Thoughts of death

MEDICAL ILLNESS
- DELIRIUM
- DEMENTIA
- PSYCHOTIC
- DEPRESSION

BEREAVEMENT
- BIPOLAR
- DISORDER

Lack of interest
Lack of appetite
Poor sleep
Fatigue
Failure to Thrive
Poor Rehabilitation
What do we tell the Doctor?

<td>[ ] 14</td>
</tr>
<tr>
<td><strong>I.</strong> Thoughts that you would be better off dead, or of hurting yourself in some way</td>
<td>[ ] 16</td>
</tr>
</tbody>
</table>

Say to resident: "Over the last 2 weeks, have you been bothered by any of the following problems?"

If symptom is present, enter 1 (yes) in column 1, Symptom Presence. If yes in column 1, then ask the resident: "About how often have you been bothered by this?"

Read and show the resident a card with the symptom frequency choices. Indicate response in column 2, Symptom Frequency.
Eeyore has a PHQ-9 score of 10.

**Hx of hypothyroidism, depression and chronic pain. He is on Synthroid 112 mcg/day, Zoloft 25 mg daily.**

**A:** Eeyore has been looking gradually more & more depressed in the past 3 months. However, in the past 2 weeks, he feels down and depressed more than half the days (2), he feels like a failure and let his friends down half or more of the days (2), he has little interest in joining activities (2), and has trouble concentrating half or more of the days (2), and sometimes thinks he would be better off dead (1)

**R:** I am worried that he may be quite depressed. Would you like to see him soon? We can also meet with SW and Rec Tx to review his activities care plan. Do you want to check labs, adjust his Zoloft, and have the psychiatrist see him again?
How common is Suicidal Ideation in nursing homes?

Based on data from MDS 3.0 for all NH patients in the US for 2014-2015, covering 15,600 NH. (PHQ-9 Item I)

**Post-Acute Admissions:**
- Highest at the time of admission (1.24%). Declines rapidly by the time of discharge (0.50%).

**Long-Stay Admissions:**
- Highest at the time of admission (1.81%). Declines significantly within 3 months (1.21%), and further decreases by the end of one year (0.98%).

**RISK FACTORS:** White, Older, Unmarried, Male, Higher cognitive level

**OTHER CHARACTERISTICS:** PHQ-9>10, mod-severe aggressive behaviors, Higher prevalence of psychiatric conditions, delusions, hallucinations, more comorbidities, use of BH medications, pressure ulcers, and more pain compared to those without SI.

How do we prevent Nursing Home suicides?

**Understand Completed Suicides**

**WHO**
Male (61.4%), mean age 76.3, Cognitively functional 75-80%

**WHEN**
Majority within 12 months (52%).

**WHAT**
Physical Health Declining (50%)
Depression (67%)

**HOW**
Hanging (38%),
Falling from height (38%)
cutting, asphyxiation, drowning, overdose.

**DEPRESSION**
62.5% of residents dx with depression NOT receiving any pharmacologic treatment at time of death.

Majority had no prior suicidal behaviors/attempts.

**WE CAN PREVENT!**
Comprehensive Teamwork

Suicide intervention

MD Evaluation, Diagnosis, Treatment
- Consider psychiatry consult
- Antidepressants

Non-pharmacologic:
- Cog-Behavioral Therapy
- Behavioral Activation
  - Environment
  - Activities
There are many classes of antidepressants...

Individualized selection is based on diagnosis, patient characteristics and side effects.

To help choose, the MD will want to know about things like:
- sleep
- appetite
- anxiety

Choices are Individualized
Antidepressants work very slowly.

It may take 4-6 weeks to see a good response.

Consider switching or adding antidepressants if no response in 4-8 weeks.

Be Patient...

...and don't give up!

2001 US Expert Consensus Guidelines
2006 Canadian Guidelines
All medications have side effects and drug interactions. Monitor closely!

- Sleepy
- Confused
- More depression
- Anxious
- Agitated
- Restless
- Dizziness

Monitor PHQ-9 monthly to quarterly

Monitor for side effects

...and monitor PHQ-9

2001 US Expert Consensus Guidelines
2006 Canadian Guidelines
What about Behaviors in Residents with Dementia?

- Resistive to Care
- Combative
- Screaming
- Cursing
- Irritable

Do NOT jump to give medications to calm them down! Change your approach first!

These could be Depression in Disguise!
What about Behaviors in Residents with Dementia?

Antidepressants can work!

• If Approach, Environmental Changes, and Activities are not sufficient, medications may be helpful.

• Antidepressants or Antipsychotics?
  • Behavioral Symptoms improve using either antidepressants or antipsychotics with similar efficacy with >85% improving/stable
The PHQ-9 can help us follow-up Depression severity.

I. Thoughts that you would be better off dead, or of hurting yourself in some way
PHQ-9 can serve as Feedback

For the team to modify the care plan
Happy Thanksgiving

THANKS FOR CARING!
If Simone Biles can ask for help, then maybe I can, too.
What about us??

The pandemic has us really stressed out

• So much information—and it changes frequently
• Concern for others’ well-being (residents, colleagues, family)
• Long hours
• Death of residents
• Stigma—of getting sick, of asking for help
• Politicization of the pandemic and response
• New mandates
• And on and on and on
Practices that can help us keep our heads...

1. Get enough sleep
2. Do some kind of physical activity
3. Gratitude
4. Talk to a trusted friend, family member, professional
5. Focus on people who lift you up (filter your social media, too)
6. Try a personal PDSA!
Most people feel guilty when talking about goals because they set unreasonable or unworkable goals. A goal is workable if it’s:
1. Something you can control (i.e., it doesn’t depend on others)
2. Manageable (i.e., not overwhelming)
3. Realistic for you (not for someone else)
4. Measurable (i.e., you know whether or not it is done or getting done)

If something goes wrong with your goal, adopt a “what can I learn from this?” attitude (versus a judgmental, “this is why I’m horrible” attitude). Also, be careful when comparing your progress with others. We usually compare our biggest weakness with another person’s biggest strength. This is unfair (and usually not accurate anyhow).
MENTAL HEALTH MATTERS
